This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

Heather?

Heather?!?!?!?

```
## WARNING: Rtools is required to build R packages, but is not currently installed.
##
## Please download and install Rtools 3.2 from http://cran.r-project.org/bin/windows/Rtools/ and then r
## Loading productConfig
##
## Attaching package: 'gplots'
##
## The following object is masked from 'package:stats':
##
##     lowess
```

You can also embed plots, for example:

```
##           attr1
## round0      2
## round3      2
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
